

Africa is a continent of Orality and many adults are not literate. The audio Bible study program now engages more than 150 families and young students. This program that enables multiple people to listen to God's word in their native language is available in local languages and French.

The teams from Sun of Hope ministry roam the villages every two weeks to discuss with the listeners about what they have heard and lessons learned. These sessions are times for answering their questions but it is also the time of conversion and acceptance of Jesus as Lord and Savior.

The audio Bible study program in the villages is so effective that we have also added community development program on the MP3 players. The audio program on MP3 players appears as one of the effective ways to share audio content in the village in alternative to the radio stations.

This method has been strengthened since we put the players into Christian families which are responsible to go and listen to the programs with non-Christian families. Since this procedure has been launched, we are seeing more conversion than in the past.
